Thursday, 30 May 2013

Dear James,

Further to our recent meeting and my introduction to your new field tester, the Fluke DSX, I have pleasure in confirming, after a thorough evaluation of the equipment, including its comparison with both our existing field test equipment and our laboratory based Agilent ENA, that HellermannTyton does offer its endorsement.

Furthermore, I am satisfied that its inherent capability and accuracy exceed the technical requirements laid out in the draft standard for Level V field test equipment. Given the technically stable nature of this document I believe that this statement will also hold true once the requirements have been ratified into a published standard.

HellermannTyton will accept link performance data from the DSX as part of the submission process for its Network Sciences Warranty Programme.

Yours sincerely,

Jason James BEng (Hons) CEng MIET MBCS  
Technical Director  
HellermannTyton
