

Can Wrench **Craft Tools**

color-coded sockets

and built-in barrel ribs

for user comfort

The Can Wrench features include color-coded socket ends and built-in ribs on the barrel for user comfort, safety, and greater torque power. The Can Wrench has two hex head sockets (7/16 inch and 3/8 inch) with reduced outside diameters that fit all new network interface devices. The 7/16 inch is black oxidized to easily distinguish it from the 3/8 inch zinc-plated socket end. The Can Wrench is also available with a wire stripper built into the barrel. The stripper head has two slots with one slot for the outside jacket of a 4-wire "quad", and the other slot for individual conductors (22 or 24 gauge).

Features:

- Two hex head sockets (7/16 inch and 3/8 inch)
- Color-coded socket ends for quick size identification
- Optional wire stripper available in handle (22 and 24 gauge)
- Wrench body constructed of tough, impact resistant, and abrasion resistant material
- Wire stripper constructed of stainless steel (rust resistant)
- Socket ends guaranteed not to split or break up to a maximum torque of 45 ft. lbs.
- Nylon body ergonomically designed to mold to user's hand for applying torque without injury
